Art Unit: 2858

## **DETAILED ACTION**

# **Priority**

1. An application in which the benefits of an earlier application are desired must contain a specific reference to the prior application(s) in the first sentence of the specification or in an application data sheet (37 CFR 1.78(a)(2) and (a)(5)). The specific reference to any prior nonprovisional application must include the relationship (i.e., continuation, divisional, or continuation-in-part) between the applications except when the reference is to a prior application of a CPA assigned the same application number.

## **Drawings**

2. Figures 3 & 6 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

# Claim Objections

Page 3

3. Claim 1 is objected to because of the following informalities: The claim language is not in the appropriate independent claim format of Preamble followed by Transition Phrase further followed by the Body of the claim. Appropriate correction is required.

The following changes are suggested: Insertion of the term "comprising" in line 1 after "combustion engine."

4. Claim 1 is objected to because of the following informalities: The phrase "capable of" renders the claim indefinite because the limitations of the claimed invention are unclear.

Appropriate correction is required.

## Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Takahashi et al., US 5,895,839, in view of Bohman et al., US 4,042,132.

Takahashi discloses an ionic current detection apparatus (FIG. 7) for an internal combustion engine for detecting an ionic current generated in spark plugs (4A-D)

Application/Control Number: 10/644,760

Art Unit: 2858

connected with secondary sides (2bA-D) of a plurality of ignition coils (2A-D), respectively, each of which generates a high ignition voltage immediately after firing of an air fuel mixture in a corresponding combustion chamber of the internal combustion engine (column 1, lines 20-26).

Takahashi does not disclose the arrangement of the said plurality of ignition coils whereby at least the directions of adjacent ignition coils do not coincide with one another.

Bohman discloses an arrangement of coils in a direction where adjacent electrodes do not coincide, ie. the axes of adjacent coils are perpendicular (column 1, lines 48-51).

Therefore, it would be obvious to a person of ordinary skill in the art, to arrange the ignition coils in a non-coinciding direction as taught by Bohman, in the spark plug-coil arrangement of Takahashi, in order to minimize coupling between adjacent coils (column 1, lines 50-51).

As per Claim 2, Takahashi and Bohman disclose the ionic current detection apparatus for an internal combustion engine as set applied to Claim 1 above.

Bohman further discloses an arrangement of coils, wherein said plurality of ignition coils are arranged in such a manner that the directions of the central axes of ignition coils among adjacent ignition coils do not coincide with one another, ie. the axes of adjacent coils are perpendicular (column 1, lines 48-51).

Therefore, it would be obvious to a person of ordinary skill in the art, to arrange the ignition coils in a non-coinciding direction as taught by Bohman, in the spark plug-coil arrangement of Takahashi, in order to minimize coupling between adjacent coils (column 1, lines 50-51).

7. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Takahashi in view of Bohman, further in view of Shimizu et al., US 6,348,797.

Takahashi and Bohman disclose the ionic current detection apparatus for an internal combustion engine as set applied to Claim 1 above.

Takahashi and Bohman do not disclose a fixture for fixing the plurality of ignition coils and installing the ignition coils on the engine through the fixture.

Shimizu discloses the fixture and the installation process through the fixture for the said ignition coils in Figures **4A** and **4B**.

Therefore, it would be obvious to a person of ordinary skill in the art, to fix the ignition coils, as disclosed by Takahashi and Bohman, in a fixture and mount the ignition coils on to the engine through the said fixture, as taught by Shimizu, in order to stabilize the coils in the desired position.

#### Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Application/Control Number: 10/644,760

Art Unit: 2858

The following patens disclose ionic current detectors with ignition coils having a primary and secondary windings connected to a spark plug, and a plurality of the said detectors for each cylinder in an internal combustion engine: Sakakura, <u>US</u>

2003/0116148 A1; Katogi et al., <u>US 6,343,500 B1</u>; Takahashi et al., <u>US 6,202,474 B1</u>;

Aoki et al., <u>US 6,151,954</u>; Kawamoto et al., <u>US 5,548,220</u>; Miyata et al., <u>US 5,347,856</u>.

Daniels et al., <u>US 2004/085070 A1</u>, discloses an ionic current detector and a method of fixing and installing the ignition coils.

Dowsett et al., <u>US 3,617,866</u>, discloses an arrangement of coils in a manner where the central axes of the adjacent coils are perpendicular to one another.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marina Kramskaya whose telephone number is (571)272-2146. The examiner can normally be reached on M-F 7:00-3:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, N. Le can be reached on (571)272-2233. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
